

Several Steps To Wash Laundry

in Whirlpool washing machine with front loading

1 plug the washing machine in and turn it on

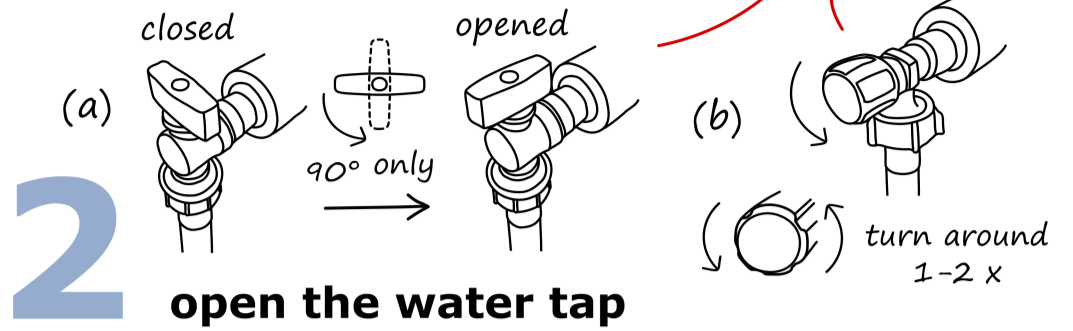

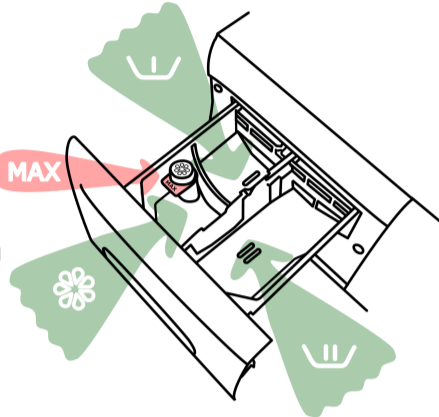

3 put in the detergent

- pods into the drum
- powder and washing gel into the detergent dispenser

compartments of the detergent dispenser (drawer):

	prewash
	softener
	main wash

- do not exceed the **max quantity mark** !

2 open the water tap
(a) by turning the handle to parallel position to the pipe or (b) by turning the tap counter-clockwise

if it doesn't go easily, the tap is probably already open

4 put the laundry in the drum

- sort your laundry according to color shades and fabric type, **empty all pockets**
- leave at least space of one third of the volume of the drum, maximum capacity (kg) is indicated in the program table
- wash clothes inside out *avoids color fading and protects print*

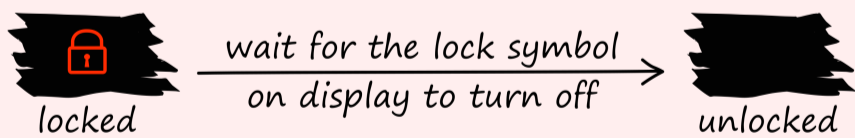

6 choose a suitable washing program and press the start button

- programs differ in washing time (usually 1-2h), temperature, activation of prewash, spinning speed and special functions *should be placed next to the washing machine*
- follow the **laundry care labels** on the clothes
- for an option overview see the **programme chart**
- more information can be found in our **detailed guide**

when the washing program is finished

7 make sure the washing machine door is unlocked !

- door is locked during the washing program, after the program ends it takes **few minutes** to unlock
- should you try to open the door before, you may damage it!
- (un)locked door is signalled by a **light indicator**

8 open the drum and take the laundry out of the machine *be gentle!*

make sure that smaller pieces of clothes have not gotten stuck in the drum or in the rubber seal

9 close the water tap
you help preventing flood from a leak or burst inlet hose

10 turn off the machine and pull the plug out of the mains

11 leave the drum door open !

otherwise the air cannot circulate through the washing machine and it will stink!
